Bearing in mind (a) that the entire thrust of the claimed invention was changed from that originally presented (ie in the original 6 claims) to that presently proposed/under consideration; and (b) paragraph 2 of section 2 of MPEP 714.13, the following are advanced: (1) applicants reliance upon page 7 lines 8-17 of the specification to establish other than a smooth surface for the film is held/seen to be misplaced, in that this material deals with a cut out SHAPE rather than with a surface topography; (2) there is apparently nothing present of record to establish that the support/backing films of either Wagner et al or Pletcher are not dimensionally stable in the manner envisioned/defined by applicants; further along this line Wagner et al clearly provided~~d~~ for the use a polyurethane such film (N.B. col 2 lines 16-19, and compare with applicants specification at page 27 lines 10-22 and especially line 16); (3) contrary to applicants contentions WRT Wagner et al, compare the indirect^A sections of this reference with page 6 lines 11-21 of applicants specification; further along this line, the thermosetting adhesive employed by these patentees is held/seen to be initially advanced to no further than B-stage; (4) the bracketed material in claims 18-19 (Amended) is incorrect; and (5) at most applicants response would apparently overcome only the rejection
